

A special Symposium funded by the National Jointed Goatgrass Research Program will be held as part of the 2009 WSWS Annual Meeting. The goal of the Symposium is to provide information on how knowledge gained from both research trials and administration of the NJGGRP could apply to regional weed management projects in both non-crop and crop production areas of weed science.

Topics will include integrated management, climatic variability as a management factor, impact of weed genetics on management, and a brain storming discussion session. The Symposium is scheduled for Wednesday afternoon. In conjunction with the Symposium, a special poster session will be held from 6:15 to 7:15 Wednesday evening with snacks and a no host bar. This Poster Session will summarize significant findings related to jointed goatgrass management gained under the Research Program.
